

Supplementary Material

A BSC^{s+s} on 40×40 Image patches

(a) Learned W bases.

(b) Log-likelihood

(c) Learned σ^2 .

(d) Learned $\pi H'$.

Figure 1: Results for BSC^{s+s} when running on $N = 500,000$ image patches of size $D = 40 \times 40 = 1600$. The number of hidden variables was set to $H = 1600$ and H' was set to 36. All other parameters were set as described in 4. (a) shows the learned basis functions \tilde{W}_h , (b) shows the approximated log-likelihood throughout 100 EM steps and corresponding learned data noise (c) and sparsity (d).

B BSC^{s+s} on 32×32 Image patches

(a) Learned W bases.

(b) Log-likelihood

(c) Learned σ^2 .

(d) Learned $\pi H'$.

Figure 2: Results for BSC^{s+s} when running on $N = 200,000$ image patches of size $D = 32 \times 32 = 1024$. The number of hidden variables was set to $H = 1200$ and H' was set to 26. All other parameters were set as described in 4. (a) shows the learned basis functions \vec{W}_h , (b) shows the approximated log-likelihood throughout 100 EM steps and and corresponding learned data noise (c) and sparsity (d).
