1 Experiments

1.1 Detecting simple differences in three synthetic benchmarks

In this additional set of experiments, the data are as described in Sec. B.1 of [1]. Results are shown in Table 1 and Figure 1.

Dataset	Method	Parameters	Type I error	Type II error	Computational time (s)
difference of means	B -test	$B = 2$	0.056	0.384	0.0040
		$B = \sqrt{n}$	0.037	0	0.1912
	Gram matrix spectrum Bootstrap	$B = 2000$	0.07	0	511.801
difference of variances	B -test	$B = 2$	0.056	0.337	0.0040
		$B = \sqrt{n}$	0.037	0	0.2043
	Gram matrix spectrum Bootstrap	$B = 2000$	0.06	0	404.186
frequency distortion	B -test	$B = 2$	0.058	0.4180	0.0038
		$B = \sqrt{n}$	0.027	0	0.1809
	Gram matrix spectrum Bootstrap	$B = 2000$	0.05	0	403.391
			0.06	0	122.429

Table 1: Synthetic benchmarks.

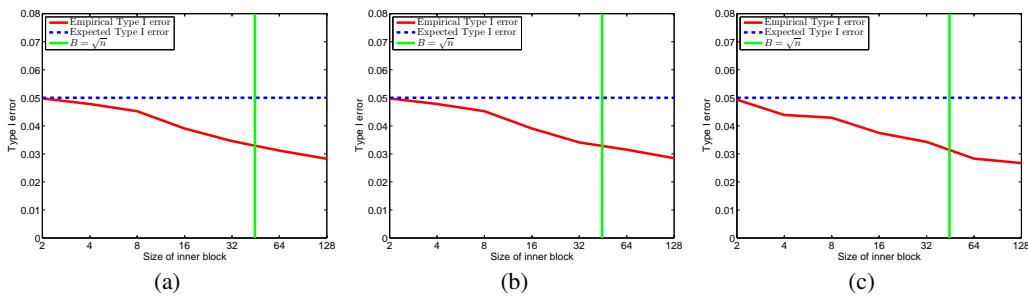

Figure 1: three synthetic benchmarks.
